A First Look at the Petrography of the Buzzard Coulee (H4) Chondrite: A Recently Observed Fall From Saskatchewan

M.L. Hutson1, A.M. Ruzicka1, E.P. Milley2, and A.R. Hildebrand2, 1Cascadia Meteorite Laboratory, Dept. of Geology, Portland State University, 17 Cramer Hall, 1721 SW Broadway, Portland OR 97207, USA. 2Department of Geoscience, University of Calgary, 2500 University Drive NW, Calgary, Alberta, T2N 1N4, Canada.

INTRODUCTION:
On November 20, 2008 a bright fireball was observed across three Canadian Prairie provinces. Between November 27 and December 6, 2008 more than one hundred individual pieces of this fall were recovered in Saskatchewan, Canada [1]. Here we describe some notable features observed in this meteorite.
